

EDUCATION

Texas State University San Marcos, **Master of Science in Computer Science**, TX, USA
 Jawaharlal Nehru Technological University, **Bachelor's in Electrical and Electronics Engineering**

June 2019 - May 2021
 Aug 2010 - May 2014

TECHNICAL SKILLS

**Programming & Scripting/
 Infrastructure Configuration:
 Frameworks/Tools:**

Python, Java, Groovy, SQL, HCL (Hashicorp Configuration Language), YAML
 Selenium, ReadyAPI, Postman, Nomad, Jenkins, Gitlab, Eclipse, PyCharm, Appium, JIRA, qTest,
 Browserstack, Kobiton, HP ALM, Sauce Labs, Amazon S3, Hashicorp Vault, JFrog Artifactory, Docker,
 Sourcetree, GIT, Tortoise GIT, Maven, TestNG, unittest, Stack provisioning & Configuration

**Testing Technologies/
 Methodologies:**

Hybrid Automation Framework Development, UI & API Automation, Mobile Automation,
 Performance Testing(Locust), CI/CD, Agile/Scrum, SDLC & STLC, Test Strategy & Planning
 REST API Testing

AI Tools:

Claude, Cursor, ChatGPT, MCP

Operating Systems:

macOS, Windows, Linux

WORK EXPERIENCE

Q2 Software, Inc.

Austin, TX, USA

Software Engineer in Test (Commercial Otters, Quality Enablement)

June 2021 – Present

- Directed test case design and led UI automation for **Commercial Otters features (ETMS, Bulk Recipient Approval, Contract Wire)**, enhancing **Page Object Model (POM)** methods to accommodate new UI updates and ensure maintainable automation aligned with release cycles.
- Owned regression validation across UUX, HQ, Ardent, and Tecton systems, ensuring stable builds and zero high-severity defects prior to deployment.
- Actively participated in **Scrum ceremonies** including **backlog grooming, sprint planning**, and **retrospectives**, proactively planning **test strategy** for upcoming features well ahead of release cycles.
- Identified and validated the end-to-end **ACH Reversal transaction flow** across interconnected systems (UUX, ACH Automation, PIQS), configuring QA environment and formalizing documentation to support future testing and troubleshooting.
- Co-architected and developed **TestMate AI**, an AI-enabled end-to-end testing platform leveraging **Amazon Titan and Claude Sonnet** LLMs to transform requirements and code embeddings into executable test cases and automation scripts, now actively used by cross-functional teams.
- Implemented **ReadyAPI-based mock services** to emulate Okta inbound SSO authentication endpoints and debug issues with Consumer Payments adapter (BillPay, iPay) responses, supporting secure and isolated integration test execution.
- Contributed to the evolution of **Q2 ATF Python-based cross-platform automation framework** within the Quality Enablement team, enabling end-to-end testing across UI, API, and Mobile systems from environment configuration through execution and reporting.
- Played a key role within the team in implementing a **Docker-based Selenium Grid** for parallel automation execution and adopted **Selenium Manager** to remove manual driver configuration, enhancing execution reliability and maintainability.
- Actively contributed to **the migration of QA test infrastructure from on-prem to AWS**, overseeing **Nomad-based deployments** and HCL configuration changes across development and staging environments.
- Designed and maintained **Jenkins-based CI/CD workflows** to orchestrate automated test execution across development, staging, and production-like environments, and configured watch-triggered jobs to automatically update test environments with version upgrades.
- Played a key role in evolving Q2 Contraster, a Python-based upgrade validation tool used by Implementation teams to detect post-upgrade user data discrepancies, designing an **Amazon S3**-backed configuration storage architecture for scalable and centralized data management.
- Deployed and debugged **Kamino**-based ISO services across QA environments using **Pushie** tool, supporting integration validation and resolving environment-specific issues.
- Led the stack migration initiative from Carbon platform to FIC, analyzing system changes and environment impacts, driving modifications to the QA stack update process across **Jenkins, Q2 Insight API, and FIC modules**, and conducting enablement sessions to help other teams adopt the updated workflow.
- Improved stability of **Appium-based mobile automation** by refactoring and standardizing test scripts, resolving flakiness issues and enhancing execution consistency across iOS and Android platforms.
- Conducted brown bag sessions to educate QA team members on Q2 Page Factory utilization and Q2 test framework conventions, and acted as **Goalie** to diagnose and **resolve automation framework issues** across QA Scrum teams.

Q2 Software, Inc.

Austin, TX, USA

Automation Developer Intern (Quality Enablement)

May 2020 – Dec 2020

- Designed and implemented visual regression testing capability within the Q2 ATF using **Needle (Python)**, enabling automated UI consistency validation across web applications.

- Authored and maintained visual diff test cases to enable automated pixel-level validation and reduce manual UI verification effort.
- Deployed visual automation suites into **Jenkins CI/CD pipelines**, modifying Groovy scripts to support dynamic build triggers and parallel execution workflows.
- Conducted Proof of Concept (POC) for **mobile visual comparison testing using Appium and Kobiton**, enabling cross-device UI validation across iOS and Android platforms.
- **Built a centralized automation repository** for SSO adapter validation across Billpay, iPay, and PayLynx platforms, enabling standardized authentication testing and improved integration reliability.

Mast Global (L Brands - Victoria's Secret/PINK)

Test Automation Engineer

Bengaluru, India

Sep 2016 – May 2019

- Designed and developed hybrid automation framework using **Java, Selenium, and Appium** supporting both iOS and Android simulators, enabling execution on Sauce Labs and local environments.
- Increased regression coverage by **65%** and reduced manual testing effort by approximately **40%** through scalable mobile automation implementation.
- Scheduled end-to-end test execution via **Jenkins-based One-Touch Automation**, enabling unattended nightly builds and reducing release validation time by **50%**
- Developed 200+ reusable automation scripts, reducing manual regression efforts by approximately **45%** across HR modules.
- Automated complex enterprise workflows in **Core HR, Benefits, Leave Accruals, and Talent Management modules** using Selenium and Jenkins CI integration
- Built SAP GUI automation solutions using **Java and Java COM Bridge**, automating repetitive functional validations and reducing manual validation cycles by **35%**
- Developed RPA Proof of Concept using **UiPath** to automate repetitive business workflows, demonstrating potential effort savings of **20-30%** in operational processes.

Cognizant Technology Solutions

Programmer Analyst (Test Automation)

Coimbatore, India

Mar 2015 – Aug 2016

- Designed and implemented end-to-end UI and API automation using **Selenium with Java** for ACA-compliant Billing workflows, validating premium calculations, adjustments, payment processing, and reconciliation logic, increasing regression coverage by **60%** and reducing financial defect leakage by **30%**.
- Performed REST API testing using Postman to validate request/response payloads, authentication flows, and error handling across integration endpoints.
- Supported QA validation across multiple test environments, improving release confidence and minimizing environment-specific failures.
- Designed risk-based test strategies and maintained detailed test plans and test cases within **HP ALM**, ensuring end-to-end traceability and coverage of critical workflows while collaborating in Agile sprint ceremonies for early defect prevention and requirement refinement.
- Partnered with cross-functional Agile teams to embed automation within sprint cycles, integrating tests into CI pipelines and reducing regression cycle time by **45%**, enabling faster, high-confidence releases.

Infosys Technologies

Intern Trainee

Mysuru, India

Dec 2014 – Mar 2015

- Completed structured technical training in **Operating Systems, Java, PL/SQL, and Networking** fundamentals.
- Acquired hands-on knowledge of **SDLC** and **STLC** processes, including test planning, defect lifecycle management, and quality assurance standards.
- Gained exposure to QA best practices and Agile/Scrum methodology, supporting iterative development and continuous improvement models.
